

BoXo Coupler

Application examples

BoXo Coupler

The original BoXo Coupler enables a fast and efficient implementation of cable-couplings with a D-type socket. It provides the best solution for large cable-cross-sections (4mm or 6 mm e.g. Speakon[®] / loudspeaker cable) as well as the possibility for creating cable extensions (PowerCon[®] etc.).

This version is only supplied with screws M3x12mm Torx 10 (socket and cable screw connection is not included!). Adapted to the respective application there can be used a MG25 cable-screw-connection or a bending protection as strain relief. The M25 winding has been incorporated already.

This product completes the existing PowerCon[®] and Speakon[®] connector systems of the Neutrik[®] AG and is perfectly suited for D-type sockets of the Speakon[®] and PowerCon[®] series.

TECHNICAL DETAILS

Dimension: approx. 60x40 (LxD in mm)

Colour: black

Weight: 40g

Assembly kit screws: 2x M3x12mm Torx 10

1x M25 winding for MG-cable screw connection or bending protection
